ELIMINATING TODAY'S BACKHAUL CHALLENGES

- Activate large amounts of towers (cell site deployment)
- Limited technical resources and knowledge
- Work with tight schedules and budget constraints (OPEX pressure)
- Maintain accuracy standards
- Validate numerous classes of service
- Optimize network performance
- Eliminate unnecessary truck rolls

COMPLETE **BACKHAUL** TURN-UP IN **15 MINUTES**

EXFO.com/**BackhaulTriPak**

ONE frontline technician empowered by time-proven, renowned expertise and a deep understanding of the realities in the field acquired through long-standing, close relationships with the world's top tier-1 network operators. **ONE game-changing solution** based on the perfect mix of knowledge and innovation, providing field crews with a new testing approach to activate large amounts of cell towers, validate numerous classes of service and optimize network performance without compromising on accuracy. **ONE test cycle** setting new efficiency standards and enabling operators to rise to the OPEX challenge–tight schedules, limited technical resources, budget constraints–and eliminate unnecessary truck rolls.

ONETECH.
ONETOOL.
ONETIME.

Complete **backhaul** turn-up in **15 minutes**

EXFO

ONETECH.

EXFO's FTB-1 solution makes any field technician an expert. The unique combination of innovative and intuitive functionalities found in the FTB-1 gives frontline technicians the ability to accurately turn up and troubleshoot any type of backhaul connection without requiring external intervention. **A true one-tech testing solution.**

ONETOOL.

No other solution in the industry matches the FTB-1 when it comes to deploying or upgrading a large number of backhaul connections with limited resources and tight schedules. With this game-changing solution, not only can field technicians characterize a fiber link at the touch of a button, they can also turn up multiple classes of Ethernet services with unprecedented speed and accuracy. **The ultimate backhaul testing tool.**

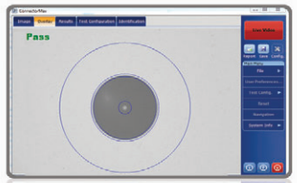
ONETIME.

EXFO's innovative, state-of-the-art backhaul testing solution empowers field technicians with easy-to-use, yet powerful, automated test and analysis capabilities that remove guesswork and deliver 100% accuracy throughout the different testing phases. **Boost productivity while eliminating unnecessary truck rolls.**

ONE FIELD-OPTIMIZED TESTING SOLUTION: BACKHAUL TRI-PAK

Supporting each phase of the network lifecycle:

CONSTRUCTION	TURN-UP	TROUBLESHOOTING
Fiber Characterization	Service Validation	Performance Optimization



ConnectorMax ANALYSIS SOFTWARE

- Automated pass/fail connector analyzer
- One-touch results in less than four seconds
- Full reports
- Compatible with EXFO's FIP-400 Fiber Inspection Probe

iOLM intelligent Optical Link Mapper

- No training required: self-setting device
- No trace misinterpretation, thanks to clear schematic link view
- Link-Aware™ delivers simple, accurate fiber-optical link test results
- Prompt diagnosis for quick, accurate identification of network issues

EtherSAM

The new standard in Ethernet service testing

- SLA validation with a single test
- 8x faster deployment
- 100% first-time-right results
- Standards-based (ITU-T Y.1564)
